

Outdoor Wall Mount Lights

Outdoor wall mount light fixtures are permanently attached and wired to the side of a wall. They offer both an aesthetic and functionality to a variety of residential and commercial environments. One outstanding feature highly valued among business owners and homeowners is the ability of outdoor wall mounted light fixtures to withstand the vicissitudes of weather. Many regions of the United States and Canada are particularly humid and endure heavy rainfall throughout much of the year. For companies and homes in these regions, outdoor wall mounted lights provide a highly attractive, reliable source of illumination that enhances architecture and compliments landscape and outdoor lighting systems. Our online inventory categorizes outdoor wall mount fixtures by lamping options, and we include within these categories a variety of fixture, glass and finish options to comprehensively address the full gamut of aesthetic needs our many clients bring to the table.

Fluorescent Wall Mount Lights

Many RLLD clients regard fluorescent outdoor wall mount lighting fixtures to be the ideal source for outdoor security lighting. This is especially true for commercial facilities such as warehouses, which need to light the perimeter and sidewalks around the building itself. The energy efficiency of fluorescent technology and the advances made in ballast technology make them an ideal choice for organizations and homeowners on a budget. Some models offer the added value of photocell timers that save power even more by turning the system on at dusk and off at dawn.

High Intensity Discharge Wall Lights

HID commercial wall mounted lighting fixtures are primarily engineered to function as landscape lighting compliments. High pressure sodium fixtures make them ideal for casting a bright circle of light around any perimeter, residence, office building, parking area, loading dock, and even along walls adjacent to public streets and sidewalks. In this category we also provide metal halide wall packs that attach directly to the sides of structures, which many people in industry find highly convenient as they represent less of an obstruction to workers and vehicles traffic.

Incandescent/Halogen Wall Mount Lighting

A significant number of our incandescent wall mounted light fixtures are designed to serve as entryway lights for people moving in and out of buildings. Not only can businesses use these fixtures to maximize building safety, but also homeowners can install them over garage and work shed entrances. We have an extensive selection here of decorative items that have proven smash hits with organizations such as apartment communities, who use them to line the interior walls of courtyards and swimming pool areas. They also look equally attractive on either the front or backyard of virtually any residence. Since some people prefer to have more of a "fixture" than glass, and others prefer to minimize the metallic in favor of either clear or translucent glass, we carry incandescent wall mounted lights in both structural types. We provide both brass and bronze finishes for those looking to match decorum to specific period styles and decorative trends as well as those looking for the very best glasswork to distribute illumination.

Wall Mount Accessories

Be sure as well when purchasing any outdoor wall mounted lighting fixtures to check with either the owner or your lighting design client to clarify their expectations for physical aesthetics. Often times people select the very best fixtures and lamping options for their needs, only to realize after the fact that the mounting itself looks to stark in contrast to the adjoining wall. For situations where a seamless blend is the most desirable fit, consider using wall-mounting accessories such as solid brass cap mounting pedestals, or rectangular brass canopies that help the lighting fixture to appear as part of the wall itself.

Lighting designers have more options when they choose RLLD as their vendor for outdoor lighting wall mount fixtures. Using us as a source of top commercial grade materials in all major lamping options gives contractors more choices to pass on to their clientèle. The increase security of both office buildings and the commercial facilities operating at night is further enhanced with an outdoor lighting system that looks as good as it works. Public facilities as well can host evening events with enhanced comfort and peace of mind for members and guests, and the aesthetic of many outdoor wall mounted lighting fixtures qualifies them in some instances as high-end lighting pieces that look like they belong along the walkway of a country club, a five star resort, or large custom home.
