

## Pet Stain Remover Free Sample Launch Coming This Week...

Natural cleaning products industry now have a new outlook on getting rid of pet stains and pet odors. The problem most do not find until they are sick is that when pet stain carpeting, they leave behind bacteria and digestive enzymes that can pollute the lungs of humans as well as pets.

Many pet stains not only keep a dark film of soot on the carpet or furniture, they also leave very pungent odors. This is where most pet stain removers are not cutting the problem and here is why.

In older formulations, most are formulated with the same solution as your common household cleaner or all purpose cleaner. This is mostly because of the scent and the harsh chemical that will initially clean the stain, but let us look a bit deeper. What about the bacteria and ammonia, this is causing problems for individuals with compromised immunity systems.

When you see a pet stain, there is a stain from the urine or feces. But also more importantly there is bacteria that settles to the fibers of the carpeting. This bacteria is not always removed from usual pet stain removers and household cleaners. This is where a mixture of natural enzymes materials.

Why using vinegar and natural household cleaners may worsen the area.

While it is possible to clean pet stain with natural cleaners in the kitchen, be careful to stay away from bleach and vinegar. In most cases bleach will literally cause a chemical reaction with ammonia and totally pollute the area. You will immediately smell the most pungent odor and the mix of chemicals can definitely hurt your lungs.

Inhalation of ammonia will cause damage to human lungs as well as pets. In many cases there is pet abuse due to amount of high chemicals of ammonia caused from pet urine. Cat urine and dog urine both have ammonia and to allow them to settle on the carpet can be bad for you, your family and pet.

You will not always have to remove the carpeting. There are new natural cleaning products that are perfect for pet stains and pet odors by <http://www.mycleaningproducts.com>.

There are other solutions to getting rid of pet stains literally with no wiping. Also as an added bonus the smells and bacteria will be neutralized not leaving any dangerous chemicals and bacteria behind. When battling pet stains be sure to use a natural pet stain remover that contains a natural enzyme that can destroy the bacteria, stains, and odors. Don't be fooled using vinegar, this pungent odor will stain inside the home for quite a while and not destroy pet odors, but only mask them. If you are curious on trying a new carpet pet stain remover there is actually during this week a new launch where you can receive a free sample of Stainerizer. Be sure to take a look at the organic pet stain and odor removal formulation that is guaranteed to remove pet stains and odors instantly as well as getting rid of bacteria caused from feces, urine, and vomit.
