

Blackjack Guide-A Blueprint to Success

Having a blackjack guide will make you a successful blackjack player in no time. The reason why? Most people go to a casino or play online without knowing the true blackjack rules of when to HIT, Double down, stay, etc... they have no strategy in place and often times do it on gut instinct. No mathematical probabilities are factored into any decision making. That is the absolute worst thing you can do. The house already has a 5% or more edge on you EVERY SINGLE HAND. You need to turn this edge around and start having the EDGE on the blackjack dealer. It is crucial to your success to have the best chance going into every single hand with an edge. Most people don't even know how to deal blackjack. Learning blackjack and everything that goes into making you a winning player is TOP priority.

I started playing blackjack over 20 years ago. Back then, blackjack was nowhere NEAR how big it is today. There was no online blackjack and the only place you could play was at the casino. In that 20 years I estimate I have won at least 5 million dollars playing blackjack. Not a bad chunk of change. When I played, it went from a hobby and sport to playing for a living. I was able to buy a new car, a new house, pay off all my debts, and live a healthy and prosperous life playing the game I love. I retired recently a millionaire all thanks to blackjack. The most important thing to being a successful player is having a proper winning blueprint in place. Without having any sort of strategy to follow, you will be setting yourself up for failure. It is the absolute worst thing to jump right into a real money situation before you develop a winning strategy. There is FREE blackjack online, one of the only online gambling games that lets you play for FREE in order to gain experience and implement your winning strategies. Before you jump into any blackjack game for real money, you need to master playing for play money. With play money the blackjack dealer acts the same as if you were playing for real money. There is absolutely no difference in game play whatsoever. In texas holdem poker, you HAVE TO deposit real money in order to gain experience. At the free texas holdem poker tables, players do not play for real. They will go all in with absolute garbage and even though you can win at the play money tables it doesn't mean you will be successful at the real money tables. If you think you will be successful without playing for real money, you got another thing coming. With blackjack, there is no difference in game play which is why you can become a successful blackjack player and gain so much experience without even dropping a dime. In whatever you decide to do, I wish you the best of luck. Winning at blackjack or even Russian roulette is one of the greatest feelings in the world!
