

How the Very First Live Casino Changed Gambling Online

The pioneer live dealer casino was pretty successful in leading all the other online casinos with live dealers that followed towards an innovative run of online casino fun. It certainly wasn't easy for the very first live online casino with live dealers to start a new mentality of online gambling without knowing that it would catch on. These live dealer games were also in danger of several technical difficulties as it involved live video feeds, which is highly vulnerable to problems. Dublin Bet Casino, as one of the first online casinos that introduced the live dealer feature solved all these challenges and started what proved to be a breakthrough in online gambling. Soon enough, many other online casinos did the same. It wasn't long until, the live dealer video feeds were well on their way to becoming the standard in online casino games.

The original live online casino opened its doors to a fully interactive online gaming sensation where casino players can play and chat with the casino dealers that deal the game. Through live web cam video feed of a real live casino game, the casino player gets to play a full-featured casino game, complete with online sounds and fair play. A lot of casino players were doubtful about the quality of the online casinos, which is the reason why a bunch of fun-seeking players find online casinos lots of fun to play, but not for real dollar games. Due to the onset of live dealer games, there was no reason to doubt the accuracy of game results. All the games are based on actual results, so there is no way you'll get beaten by a computer without you even getting a chance. Due to the live dealer feature, you are sure you are playing by the real odds of the game, and the live dealers will motivate you even more.

The entire concept started when the internet was found to be a promising means of communicating. It did not take long for people to invent a way to put the gamble online. Microgaming was the first to design the online live video concept. When it started, it was mainly about fun games, but not really about gambling, at the time, since allowing monetary gambling online was still not possible. As soon as a company called CryptoLogic came up with a way to make monetary gambling possible, the rest was history. A lot of online casinos became popular, and people all over the world started playing online, playing for money at an online casino a popular experience. One casino feature was still missing, and it was the live video what finally led people to want more real likeness of a real casino than just an online game.

Finally, with the advent of live video technology, the live dealer games became possible. Online casinos picked three top favorite games and created fantastic live dealer games out of them. From common casino game, they added a window that displayed the live webcast with live dealer sounds. They also installed the chat option, to make gaming even more satisfying. With it, players can always communicate with the live casino dealers even in the middle of a game. The live dealer version of the three most played casino games is available. The most common games are baccarat, live blackjack, and live roulette. Actually, when people want to play these live games online, the simple online version is just not enough anymore. The casino games with a real dealer makes the experience complete.
