

Discovering the Best Binoculars, UK

Before answering the question 'what are the best binoculars (UK)' I need to make it very clear that a good pair of binoculars is something you can and should get really passionate about. The best binoculars bring distant images to life with amazing resolution and clarity making you feel as if you are part of a completely new and exciting world.

Imagine being able to see every little detail of what you are viewing with absolutely perfect contrast and clarity no matter where you are and what you are doing. If you experience such perfection you will become passionate and you'll wonder how you ever lived without the very best binoculars. UK binoculars do vary from what is available in the US and the two environments are completely different so the best binoculars in the US may not be available in the UK or may not perform so well under the different environmental conditions.

You also have to consider that people's opinions vary, sometimes quite dramatically, so what each person considers to be the best binoculars (UK) is probably not the same. Also, you need to be clear as to what you want to use the binoculars for, the best binoculars for astronomy won't necessarily be much good for bird watching and the best sport binoculars won't necessarily be very good as marine binoculars.

One thing that you need to look for in any binoculars is the quality of the lenses and prisms. The best binoculars come with fully multi-coated lenses and top quality Bak-4 prisms. Given the generally damp environment, the best binoculars for the UK, if you want to use them regularly outdoors, should be waterproof and fog-free to ensure a perfect viewing experience.

If you are looking for best marine binoculars in the UK then take a look at the Steiner Commander XP binoculars, they are amazingly high spec, waterproof to 10mtrs, nitrogen sealed with Steiner Nano-Protection (weather proof protection against the environment), high performance HD XP optics, long life rubber armouring and interchangeable eyecup system, truly professional marine binoculars which deliver an amazing performance in low light conditions and come with a 30 year guarantee.

If you are looking for the best binoculars (UK) with image stabilizing then look no further than the Canon IS Binoculars. I know I don't stand alone when I say that once you own the Canon 10x42L IS binoculars you'll wonder how you survived without them. Users absolutely rave about them. The lenses are just fantastic, they are the first binoculars to carry the red L-series ring only previously found on Canon professional camera lenses. These binoculars must come high up the list for the best binoculars in the UK, fully waterproof, unrivalled IS capabilities (in any moving environment), superb lens quality, close focus distance of just 2.5mtrs and long eye relief. The one main downside is perhaps weight (1030g) but to get the IS technology there always has to be a compromise regarding the weight.

Bushnell make great binoculars so in your search for the best binoculars for you take a look at the Bushnell Elite. Premium Bak-4 phase coated prisms, fully multi-coated lenses, waterproof, nitrogen sealed, rainguard lens coating and long eye relief. The new XTR technology utilises no less than 60 layers of coatings on each prism to deliver a combined 90% light transmission.

There are some great little compact binoculars to, one of my favourites is the Olympus RC I compact binoculars. Only 195g in weight, credit card size when folded, really stylish, high index Bak-4 prisms and multi-coated lenses.

When buying binoculars it all comes down to what you want to use them for and how much you are prepared to pay. Price doesn't always denote quality and binoculars that are the best for one activity aren't necessarily the best for another. Don't however make the mistake of paying too little, finding they are useless and casting them aside. The best quality lenses do cost! No one can say what are the absolute best binoculars (UK) unless they know what the binoculars are to be used for and even then, as I said, it's still a matter of opinion. Just watch out for the lens coatings and the quality of the prisms, make sure the weight suits you, don't go for too high a magnification if the binoculars are to be hand held (unless you buy IS binoculars), for outdoors, in the UK, waterproof is usually best, if you are new to binoculars and looking to observe fast moving objects then go for binoculars with a wider field of view and if you wear glasses you want an eye relief of 15mm plus. Happy hunting for the best binoculars in the UK.
