

## LED Flashlights vs Traditional Flashlights

You may see in many adventure films, flashlights always come in handy in many emergency situations. Flashlights can become an important tool in your house in many cases. They can be helpful when electricity supply was shut down, or can be use in hunting and camping activities, or use them as a backup source of light in your car, or even include them in a disaster kit. Flashlights can become a life saver in many situations and become more and more important source of light in case of emergency.

Traditional flashlights usually composed by a light bulb, flashlight case and powered by traditional batteries. They can disperse or assemble with ease and also very easy to use. But unfortunately, they are not always dependable. Light bulb used in traditional flashlight has a limited lifespan and always generate an unwanted high heat. It can be broken due to high heat or provide fades light without any warning. More than that light bulb in traditional flashlight consumes much more power than modern flashlight and causing batteries run out quickly. You have to stock a few batteries supply to ensure your traditional flashlight will not run out before you needed.

LED flashlights (LED: light emitting diode) are a new technology introducing a new source of light to the world. With the same amount of batteries, LED flashlights can provide more power of light and can be last longer at least 10X than traditional flashlights. The less battery you use the more earth friendly you are. LED flashlights can be mentions as long lasting tools; they can be continuous use more than 100 hours before the batteries run dry. It doesn't generate an unwanted high heat power; provide a constant light even if the batteries are running low; with one set of batteries it can run a hundreds of hours before you need to replace it with new batteries.

The usage of LED flashlights are various in many way. They usually use as a household item for emergency case or disaster kit. People who love an adventure life can bring them for hiking, hunting and camping. Police forces and firemen carry them along with their equipment and make them ready for use in any situations. Keychain LED flashlights can be a good idea as a gift for your friends.

As of to date, there are many leading brand who sale high quality LED flashlights for example, Surefire, Streamlight, Mag-Lite, Inova, Petzl, Pelican. These brands feature various high quality LED flashlights with different propose. Some of them have many advance features that you may not require them on your normal usage. So you need to learn more about individual product that best suite your need before you buy.

With LED flashlights, you can ensure a more efficiency and effectiveness over traditional flashlights in many ways. They are reliable and durable which means you can trust your LED flashlights in your hand that they will always work whenever you need them. They will not break easily when drop from high place or when you accidentally ram them into a hard surface. Many organizations like fire department and police department usually include LED flashlights as one of necessary tool. LED flashlights are definitely proved themselves as a reliable tool over traditional flashlights.
