

## BBC Freesat - High Definition Viewing

Ever since the earliest days of television viewers have been looking for a better way to watch their favourite programs. From the earliest and most primitive television sets to today's satellite TV, digital TV and HD television, the world of televisions and television viewing has undergone remarkable progress. There have of course been many great breakthroughs in television and video technology, and many great leaps forward as television and television viewers have grown up. The earliest black and white television sets eventually gave way to brand new colour TV sets, giving those old TV shows a whole new look and paving the way for new and different kinds of television programming.

The size, shape and styles of televisions have changed a great deal over the years as well. The earliest television sets were huge creations, often serving as a sturdy piece of furniture as well as a centre of family entertainment. While these early sets could be attractive, moving these behemoths was a difficult and time consuming affair. As the technology behind the television began to grow, the size and weight of televisions began to shrink a bit. Those old style console TVs that served as pieces of furniture would eventually be replaced by smaller portable televisions that could easily be moved from room to room. These smaller sized sets would eventually make it possible for families to own more than a single set, something that would have been all but unthinkable when television technology was still new and very expensive.

These days of course televisions have become even smaller and more portable, and the advent of LCD, plasma and other flat screen technologies has even allowed TV viewers to hang their sets on the wall for easy viewing. These wall mount units have taken portability to a whole new level, and the steeply declining prices have made what was once a luxury item for the rich into a commodity that is within the reach of those of more modest means.

All of these changes in the technology of the television has gone hand in hand with advances in programming. The programs that bring those modern television sets to life has undergone some remarkable changes as well, and there are many more breakthroughs on the horizon as well.

One of the most promising of these new technologies is high definition television, known to television viewers everywhere by the initials HD. High definition programming can provide a superior viewing experience for everything from sports programming to sitcoms to big blockbuster films. No matter what the programming, high definition can make it look better and sharper, with more realistic colours and a more realistic looking picture.

One of the newest entries in the digital television universe is the recently launched BBC Freesat. This unique service is a joint venture of the BBC and ITV, and it promises to bring true digital quality television to viewers throughout the United Kingdom.

Cost conscious will be pleased to know that many of the high definition programming and channels that are part of BBC Freesat are available for free. This unique service can be an excellent alternative to the popular Sky Digital service.

With BBC Freesat, TV viewers who already own a Mini Dish can simply purchase a new BBC Freesat receiver and instantly receive all those free digital channels. Those viewers who are looking for the ultimate television experience can purchase a new BBC Freesat HD receiver to receive the best of digital television at no additional charge. All it takes to get those great digital channels for free is a high definition television and a BBC Freesat HD receiver.

With more than 80 high quality channels available, the new BBC Freesat represents a real alternative to programs such as the Sky system. As a matter of fact BBC Freesat service has a number of important advantages over its competition, including of course all that free programming. Unlike BBC Freesat, the Sky system does not make all that great HD programming available at no cost. It is important for consumers and television viewers not to confuse the new BBC Freesat with the freesat systems available from Sky. Unlike those Sky systems, the new BBC Freesat system provides plenty of high quality HD programming for free.

In addition, BBC Freesat features many more channels, many of them in HD, as well as excellent coverage for the entire country. With a coverage area reaching 90 to 95% of the country, the new BBC Freesat service is an excellent choice for those areas with poor television reception.

Another important advantage of the new BBC Freesat service over Sky and other competitors is the fact that it requires only a one off payment, with no ongoing subscription fees needed. Anyone who has ever subscribed to a pay TV service understands how expensive these services can become, making this one off payment model an excellent cost saving benefit. The BBC Freesat service requires no subscription fee, no contract and no ongoing commitment of money.

And with more than 80 digital television and radio channels available, there will be plenty to watch and to hear with this great new service. The high quality programming available on BBC Freesat make it an excellent choice for the discriminating television viewer and radio fan. From the latest in

movies and music to the best educational and entertainment programs BBC Freesat offers television viewers a wealth of choices. Children will enjoy these great channels as well, and BBC Freesat offers many of the finest children's programming in the country. And with such excellent coverage, BBC Freesat is available in virtually every home in the UK.

The new BBC Freesat service makes it easy to find something to watch no matter what the time of day or night. The service includes a convenient and easy to use on screen program guide viewers can use to see a seven day program guide. With so many channels to choose from, this handy seven day programming guide makes it easy to find your favourite programs no matter when they are played.

Services like the new BBC Freesat service are bringing viewers full circle from the earliest days of television programming. When television first hit the market, only a handful of programming choices were available. Only a few channels existed, and only a few select programs were available on those limited channels. Times have certainly changed, and these days there are many more choices for the discriminating television viewer. Whether you favour the latest educational nature programming, the most popular summer blockbusters or the funniest comedies, you will find lots of great things to love with the new BBC Freesat service. Be sure to check out this great service today and start enjoying the best in digital television and radio. This great new service will allow television viewers from across the country to enjoy the latest in digital programming and satellite TV at a fraction of the cost of competing services.
