

Free PC Scans

Is your PC acting weird lately? Believe it or not your PC is just like you and I, sometimes it doesn't feel well. We usually take some kind of medication or go see a doctor, to find out what's wrong. Your PC is basically the same way, it might be a little under the weather. Just like you and I if the problem goes on without being attended too, it get worse or better yet fatal. Today's information highways are crawling with all kinds of nasties. just waiting to destroy your PC's good health. Nasties like spyware, adware, malware, viruses and the list just keep going. When these so called nasties get inside of your PC, it's like cancer spreading throughout your system. A PC can catch spyware, just like you can catch a cold or the flu. Some advertizing companies lure you in, so your PC can contract spyware. Once spyware is on your PC, they can invade your privacy by monitoring your surfing habits. Using these tactics they can actually take over your system completely. That's why keeping your PC healthy is important. Don't wait until your PC is sick, be proactive and prevent it.

If you value your PC's health, don't surf the internet without the proper protection. Keep your PC safe with antispysware and antivirus programs. Most of these programs let you scan your PC for free. Yes, you heard me right you can scan your PC for spyware, adware and viruses for free. The free PC scan will detect weather your PC has spyware or viruses. Once you detect weather or not you have these nasties on your PC, you can elect to remove them or not. Believe it or not 95% of the PC's surfing the internet are infected. Find out why your PC been acting weird lately; get it scanned.

Free PC Registry Scans:

Everyone has a PC now days, but learning how to take care of it is another thing entirely. Weather you use your PC for playing games, work or just surfing the internet, you must learn how to properly take care of your PC. All PC's with a windows operating system, has a registry. Your PC registry is where all the vital information is stored, it's like a brain. When you surf the internet or install programs on your PC, you are making changes to your PC registry. Over time, after surfing and installing different programs; data can build up in your registry like a clogged drain. The tricky part, is learning how to keep that drain unclogged. When your registry is clogged with data, it's like your brain not getting oxygen. The only way to prevent this from happening is to clean your registry.

If you surf the internet regularly, and had your PC over six months you're due for a registry cleaning. Their are a lot of registry cleaning programs out there, but trust me all of them are not created equal. Make sure you take the time to research the program, to insure you're getting a quality registry cleaner. Some registry cleaning programs offer free registry scanning, These are usually the better programs. By getting a free registry scan, you can see just what this program is capable of doing. Once the scan is finish, the registry cleaner program will display all that is wrong with your registry. You will have the option to fix your registry or not, the choice is yours. If you choose to fix your registry, you will purchase and download the registry cleaning program to your PC. Remember your PC registry is like a brain; without the brain what do you have. So clean your registry, get a free registry scan. Why not? it's free.
